

# Sharebrook Estate and Safari Park

# Sharebrook Estate and Safari Park

---

## Task Scenario

You have been asked to create a database for Sharebrook Estate and Safari Park. The attractions include a private rail track. It has an old steam engine and two carriages that are used for events. Evening Christmas events have been planned for 20 to 22 December. The database will record information about:

- events
- customers
- event sales.

Each event has a different ticket price.

There are two types of seat: seats without tables and seats with tables.

There must be at least one ticket purchased with each sale.

A sale cannot exceed eight tickets.

# Examining the data

---

Seat Sale ID	Event ID	Customer ID	Event Description	Surname	Event Date	House Number	Postcode	Seat Type	Event Ticket Price	Num Tickets
1	1	1	Christmas Songtime	Bell	20/12/2021	7	FE3 1LM	Table	£10.00	2
2	1	2	Christmas Songtime	Squires	20/12/2021	12	ME3 2GG	No Table	£10.00	1
3	2	3	The Polar Express	Hudson	21/12/2021	1	FE3 5HJ	Table	£15.00	4
4	2	72	The Polar Express	Williams	21/12/2021	6a	ME4 2LS	No Table	£15.00	2
6	3	1	Home Alone	Bell	22/12/2021	7	FE3 1LM	Table	£12.50	4
7	3	69	Home Alone	Ferguson	22/12/2021	Greylands	DL8 1TH	No Table	£12.50	8

## Examining the Data - Questions:

What data type would you set for House Number?

How many different events are there?

How many different customers are there?

How many different seat types are there?

Which data is repeated?

What tables are required?

Which fields belong to which table?

# Deciding on a database structure

---

## **Event ID**

Event Description  
Event Date  
Event Ticket Price

## **Seat Sale ID**

Seat Type  
Num Tickets

## **Customer ID**

Surname  
House Number  
Postcode

Question - in the Seat Sale Table - how do we know which Event is being booked?

Question - in the Seat Sale Table - how do we know who is booking?

# Deciding on a database structure

---

## **Event ID**

Event Description  
Event Date  
Event Ticket Price

## **Seat Sale ID**

Event ID  
Customer ID  
Seat Type  
Num Tickets

## **Customer ID**

Surname  
House Number  
Postcode

Question - in the Seat Sale Table - how do we know which Event is being booked?

Answer - by putting the Event ID in the Seat Sale Table

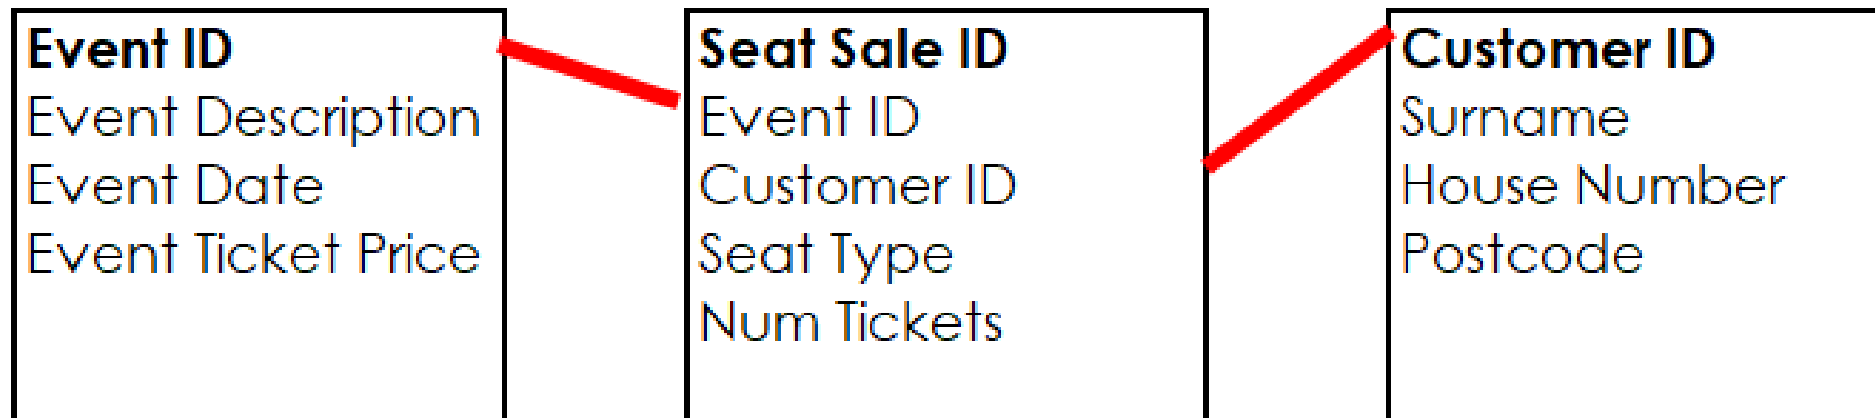

Question - in the Seat Sale Table - how do we know who is booking?

Answer - by putting the Customer ID in the Seat Sale Table

Question: How do we link (relate) the tables?

# Creating Relationships

---

Question: How do we link (relate) the tables

Answer: Through common fields (Key fields)

# Activity 1: Database relationships screenprint (45 minutes) – 8 marks

---

## Activity 1: Database relationships screenprint (45 minutes)

Study the data extract provided in **Figure 1**. Create an efficient database structure that:

- minimises data duplication
- accepts the data provided
- uses recognised naming conventions
- ensures data integrity.

Ensure you use **all** and **only** the fields shown in **Figure 1**.

Screen print your database relationships.

You are advised to spend 45 minutes on this activity.

# Activity 1 explained

---

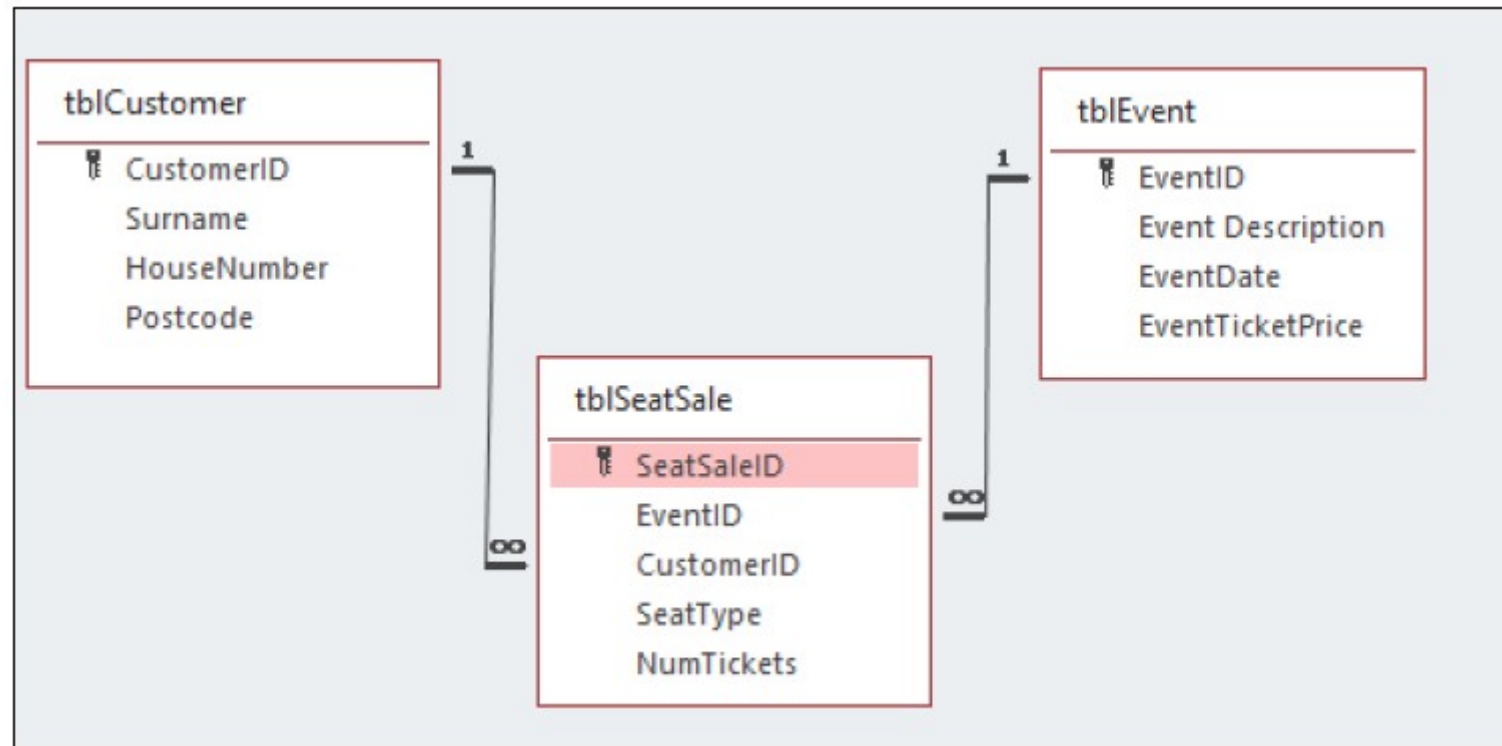

Create an efficient database structure that:

- minimises data duplication - this is achieved by creating a sensible structure (tables)
- accepts the data provided – this is achieved by selecting the correct data types and field sizes
- uses recognised naming conventions – using the correct prefixes – e.g. tblCustomer
- ensures data integrity – a structure that requires minimal repetition of data

# Activity 1: Database relationships screenprint (45 minutes) - 8 marks - **answers**

---

# Activity 2: Table structures and validation (45 minutes) - 8 marks

---

Create efficient table structures based on Activity 1 and the data shown in **Figure 1**.

The table structures must use suitable validation to meet these requirements:

1. A record will not save without the surname, house number and postcode of the customer being present
2. A record will not save if the postcode is not in the correct format
3. A record will not save if the event selected is invalid
4. A record will not save if the seat type is invalid
5. A record will not save if the number of tickets purchased is below the accepted range
6. A record will not save if the number of tickets purchased is above the accepted range

Input the data you have been given into your relational database.

# Activity 2: Table structures and validation (45 minutes) - 8 marks - **answers**

## Table Structures

Add screenprints of each of your tables in design view showing the table names, field names and data types ONLY

tblCustomer	
Field Name	Data Type
CustomerID	Number
Surname	Short Text
HouseNumber	Short Text
Postcode	Short Text

tblEvent	
Field Name	Data Type
EventID	AutoNumber
Event Description	Short Text
EventDate	Date/Time
EventTicketPrice	Currency

tblSeatSale	
Field Name	Data Type
SeatSaleID	AutoNumber
EventID	Number
CustomerID	Number
SeatType	Short Text
NumTickets	Number

# Activity 2: Table structures and validation (45 minutes) - 8 marks

1. A record will not save without the surname, house number and postcode of the customer being present - Presence Check (Required or Validation Rule)

**Example: Customer Name**

General Lookup	
Field Size	20
Format	
Input Mask	
Caption	
Default Value	
Validation Rule	Is Not Null
Validation Text	You must enter the customer's surname
Required	No
Allow Zero Length	Yes
Indexed	No
Unicode Compression	Yes
IME Mode	No Control
IME Sentence Mode	None
Text Align	General

# Activity 2: Table structures and validation (45 minutes) - 8 marks

## 2. A record will not save if the postcode is not in the correct format - Format Check (Input Mask)

Character	Meaning
>	Converts all characters that follow to uppercase
L	Must enter a letter
0	Must enter a digit (0-9)
\	Characters immediately following will be displayed literally (e.g. space)

General Lookup	
Field Size	7
Format	
Input Mask	> LLO\ OLL
Caption	
Default Value	
Validation Rule	Is Not Null
Validation Text	You must enter the customer's postcode
Required	No
Allow Zero Length	Yes
Indexed	Yes (Duplicates OK)
Unicode Compression	Yes
IME Mode	No Control
IME Sentence Mode	None
Text Align	General

# Input Masks

A copy is in  
your Notebook

Character	Explanation
0	User must enter a digit (0 to 9).
9	User can enter a digit (0 to 9).
#	User can enter a digit, space, plus or minus sign. If skipped, Access enters a blank space.
L	User must enter a letter.
?	User can enter a letter.
A	User must enter a letter or a digit.
a	User can enter a letter or a digit.
&	User must enter either a character or a space.
C	User can enter characters or spaces.
.,;: - /	Decimal and thousands placeholders, date and time separators. The character you select depends on your Microsoft Windows regional settings.
>	Coverts all characters that follow to uppercase.
<	Converts all characters that follow to lowercase.
!	Causes the input mask to fill from left to right instead of from right to left.
\	Characters immediately following will be displayed literally.
""	Characters enclosed in double quotation marks will be displayed literally.

# Activity 2: Table structures and validation (45 minutes)

## 8 marks

3. A record will not save if the event selected is invalid - Validation Rule

Event Description

General Lookup	
Field Size	60
Format	
Input Mask	
Caption	
Default Value	
Validation Rule	"Christmas Songtime" Or "The Polar Express" Or "Home Alone"
Validation Text	You must enter an appropriate event description
Required	No
Allow Zero Length	Yes
Indexed	No
Unicode Compression	No
IME Mode	No Control
IME Sentence Mode	None
Text Align	General

# Activity 2: Table structures and validation (45 minutes)

## 8 marks

4. A record will not save if the seat type is invalid

Seat Type

tblCustomer   tblEvent   tblSeatSale						
SeatSaleID	EventID	CustomerID	SeatType	NumTickets	Click to Add	
1	1	1	Table	2		
2	1	2	Table	1		
3	2	3	No Table	4		
4	2	72	No Table	2		
5	3	1	Table	4		
6	3	69	No Table	8		
*	(New)			0		

# Activity 2: Table structures and validation (45 minutes)

## 8 marks

- 5. A record will not save if the number of tickets purchased is below the accepted range
- 6. A record will not save if the number of tickets purchased is above the accepted range

Number of Tickets

General    Lookup	
Field Size	Long Integer
Format	
Decimal Places	Auto
Input Mask	
Caption	
Default Value	0
Validation Rule	Is Not Null And Between 1 And 8
Validation Text	Must be at least 1 ticket bought and no more than 8
Required	No
Indexed	Yes (Duplicates OK)

# Activity 2: Table structures and validation (45 minutes)

## 8 marks

Additional Validation - Table lookup:

On 'Foreign Keys'

tblSeatSale					
SeatSaleID	EventID	CustomerID	SeatType	NumTickets	Click to Add
1	1	1	Table	2	
2	1	Christmas Songtime	20/12/2019	£10.00	
3	2	The Polar Express	21/12/2019	£15.00	
4	3	Home Alone	22/12/2019	£12.50	
5	3	1 Table		4	
6	3	69 No Table		8	
*	(New)			0	

See 'How to' on the next slide.

# Activity 2: Table structures and validation (45 minutes)

8 marks

## Additional Validation - Table lookup on tblSeatSale:

### On 'Foreign Keys'

The purpose is to help the user to identify the correct ID number when entering data

tblSeatSale					
SeatSaleID	EventID	CustomerID	SeatType	NumTickets	Click to Add
1	1	1	Table	2	
2	1	Christmas Songtime		20/12/2019	£10.00
3	2	The Polar Express		21/12/2019	£15.00
4	3	Home Alone		22/12/2019	£12.50
5	3	1	Table	4	
6	3	69	No Table	8	
* (New)				0	

See 'How to' on the next slide.

# How to: Table lookup on tblSeatSale:

On tblSeatSale, select 'EventID' and choose 'Lookup Wizard'. Note that if you have already created relationships you will be prompted to delete these first.

In the first window of the wizard, select 'I want the lookup field to get the values from another table or query'

In the next window choose tblEvent (where event details are stored) - then choose the fields that you want to see in the lookup list. Finally, unhide the key column and stretch the columns so all data can be seen. Click finish, add relationships

tblSeatSale	
Field Name	Data Type
SeatSaleID	AutoNumber
EventID	Number
CustomerID	Short Text
SeatType	Long Text
NumTickets	Number
	Date/Time
	Currency
	AutoNumber
	Yes/No
	OLE Object
	Hyperlink
	Attachment
	Calculated
	Lookup Wizard...

Lookup Wizard

This wizard creates a lookup field, which displays a list of values you can choose from. How do you want your lookup field to get its values?

☒ I want the lookup field to get the values from another table or query.

☐ I will type in the values that I want.

Cancel

< Back

Next >

Finish

Lookup Wizard

Which fields of tblEvent contain the values you want included in your lookup field? The fields you select become columns in your lookup field.

Available Fields:

Finish

# Activity 2: Table structures and validation (45 minutes)

## 8 marks

---

### Screen Prints for Activity 2:

Display your screenprints on your Notebook to show:

- the design view of each table showing the structure, including the fields and data types
- validation including a suitable example for each of these:
  - o presence check
  - o length check
  - o value lookup or range check
  - o table lookup
  - o format check.

# Activity 3: Queries and Report (40 mins) - 12 marks

---

## Queries

- a) Create a query to display an alphabetically sorted list of the events running on the 20th and 21st of December. It must show event description and event ticket price only.
- b) Create a query that will calculate:
  - i. the number of table tickets sold
  - ii. the income for the tickets sold.

## Display:

- the event description
- the number of table seat tickets sold
- the income generated.

# Activity 3: Queries and Report (40 mins) - 12 marks

## Queries

- a) Create a query to display an alphabetically sorted list of the events running on the 20th and 21st of December. It must show event description and event ticket price only.

The screenshot shows the Query Design View for a query named 'qry1AlphabeticalEvents'. The design grid shows the 'tblEvent' table selected. The fields listed are EventID (marked with a key icon), Event Description, EventDate, and EventTicketPrice. Below the design grid, the Field List pane shows the following configuration:

Field:	Event Description	EventTicketPrice	EventDate
Table:	tblEvent	tblEvent	tblEvent
Sort:	Ascending		
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Criteria:			Between #20/12/2021# And #21/12/2021#
or:			

See 'How to' on the next slide

The screenshot shows the Query Results View for a query named 'qry\_AlphabeticalEvents'. The results are displayed in a table with two columns: 'Event Description' and 'EventTicketPrice'. The data is sorted alphabetically by event description.

Event Description	EventTicketPrice
Sing A Long Christmas Extravaganza	£10.00
The Polar Express Extravaganza	£10.00
*	£0.00

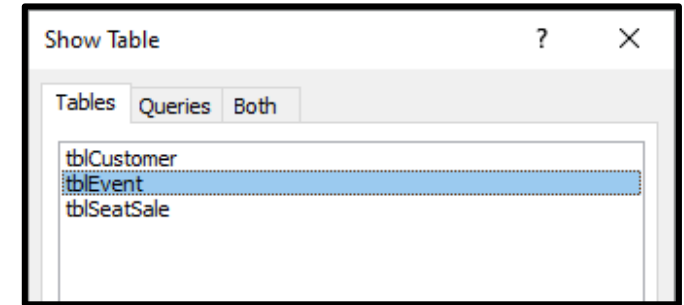

- a) Create a query to display an alphabetically sorted list of the events running on the 20th and 21st of December. It must show event description and event ticket price only.

### ‘How to’:

Click on the ‘Create’ menu and select ‘Query Design’

The window that opens asks you to select the required table to return the necessary information. In this case we only need tblEvent – double click or use the ‘Add’ button.

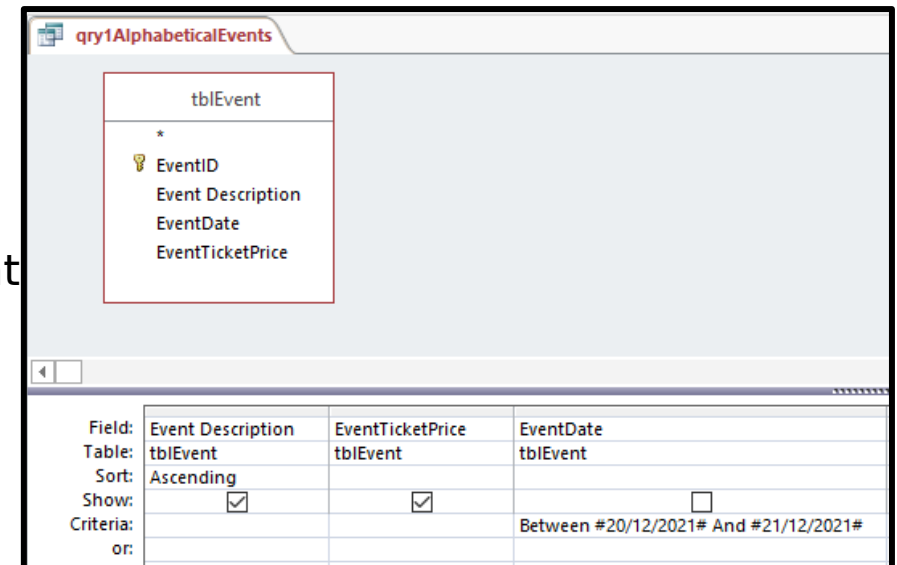

Double click on the fields required to return the requested information – they will appear in the ‘query grid’ below. Read the instruction carefully so that you only choose relevant fields – Event Description, Event Ticket Price and Event Date

Type the criteria Between 20/12/2021 and 21/12/2021 under the Event Date. Untick the ‘Show’ box (date not required to show).

Run the query to test that only two records show.

Name the report qryAlphabeticalEvents

# Activity 3: Queries and Report (40 mins) - 12 marks

## Queries

- b) Create a query that will calculate:
- the number of table tickets sold
  - the income for the tickets sold.

## Display:

- the event description
- the number of table seat tickets sold
- the income generated.

See 'How to' on next slides

Event Description	TableTicketsSold	Income
Christmas Songtime	2	£20.00
Home Alone	4	£50.00
The Polar Express	4	£60.00

- b) Create a query that will calculate:
- the number of table tickets sold
  - the income for the tickets sold.

## 'How To'

Step 1: Select 'Create' and 'Query Design' and create the query as shown. Add the criteria 'Table as shown' (remove the tick from show). Note that initially 6 records will be returned until we do some grouping.

Step 2: Click on the 'Totals' button – this will give extra row in the query to do some calculations.

Step 3 – in the 'Total' row, under NumTickets, choose 'Sum'. This will address bullet point 2 of the question.

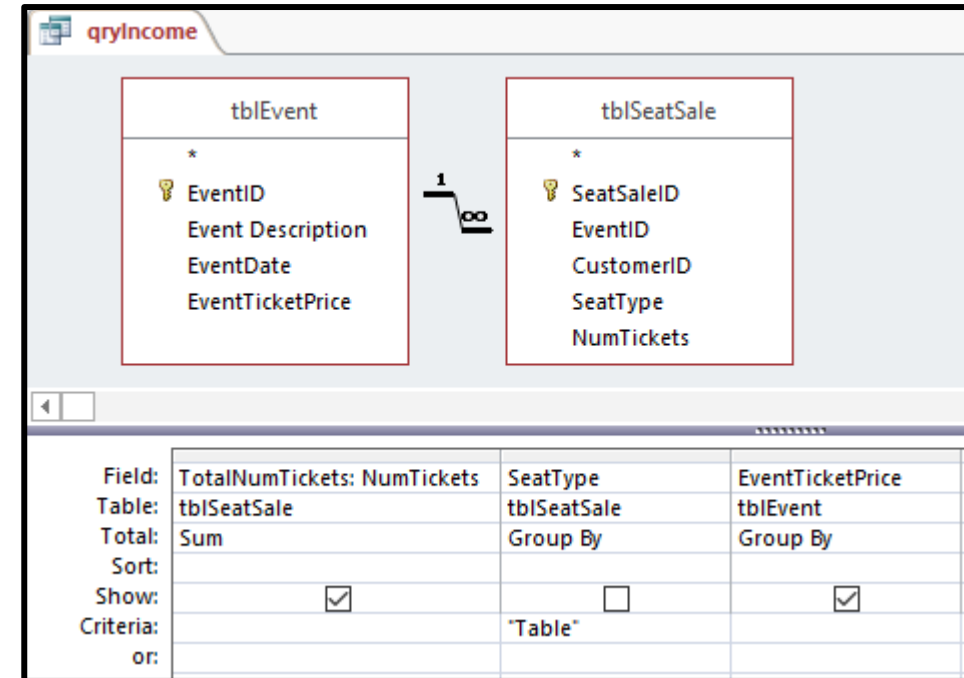

Note that when you run the query it changes the name of the calculated field to 'SumOfNumTickets'.

You can change this easily to something more sensible.

**See next slide**

## Display:

- the event description
- the number of table seat tickets sold
- the income generated.

Event Description	SumOfNumTickets	EventTicket
Christmas Songtime	2	£10.00
Home Alone	4	£12.50
The Polar Express	4	£15.00

- b) Create a query that will calculate:
- the number of table tickets sold
  - the income for the tickets sold.

## 'How To'

Step 4: Change the name of the calculated field – note that you will want to use this name in the next step. Click into 'Design' view. Type a name 'TotalNumTickets:' in front of the field NumTickets – don't forget the colon (:).

Step 5: Calculate the income generated (third bullet point). In a spare column (column 5) you will type in the required calculation. We want to multiply the total number of tickets sold by the ticket price to work out the total income.

Type in: TotalNumTickets\*EventTicketPrice

Note that \* means multiply. Square brackets will be automatically added.

You can change the name 'Expr1' as above

## Display:

- the event description
- the number of table seat tickets sold
- the income generated.

# Activity 3: Queries and Report (40 mins) - 12 marks

---

## Report (based on a Query)

- c) Create a report that shows ticket sales for the events. For each event calculate:
- the number of customers who have purchased tickets
  - the number of table tickets purchased
  - the number of non table tickets purchased
  - the total number of tickets purchased

### Display:

- a suitable report title
- the event descriptions
- the number of customers who have purchased tickets
- the number of table tickets purchased for each event
- the number of non table tickets purchased for each event
- the total number of tickets purchased for each event

The report must fit on one page. **Important note:** you will need to convert the report to a pdf and save in your folder – next step (item d)

c) Create a report that shows ticket sales for the events. For each event calculate:

- the number of customers who have purchased tickets
- the number of table tickets purchased
- the number of non-table tickets purchased
- the total number of tickets purchased

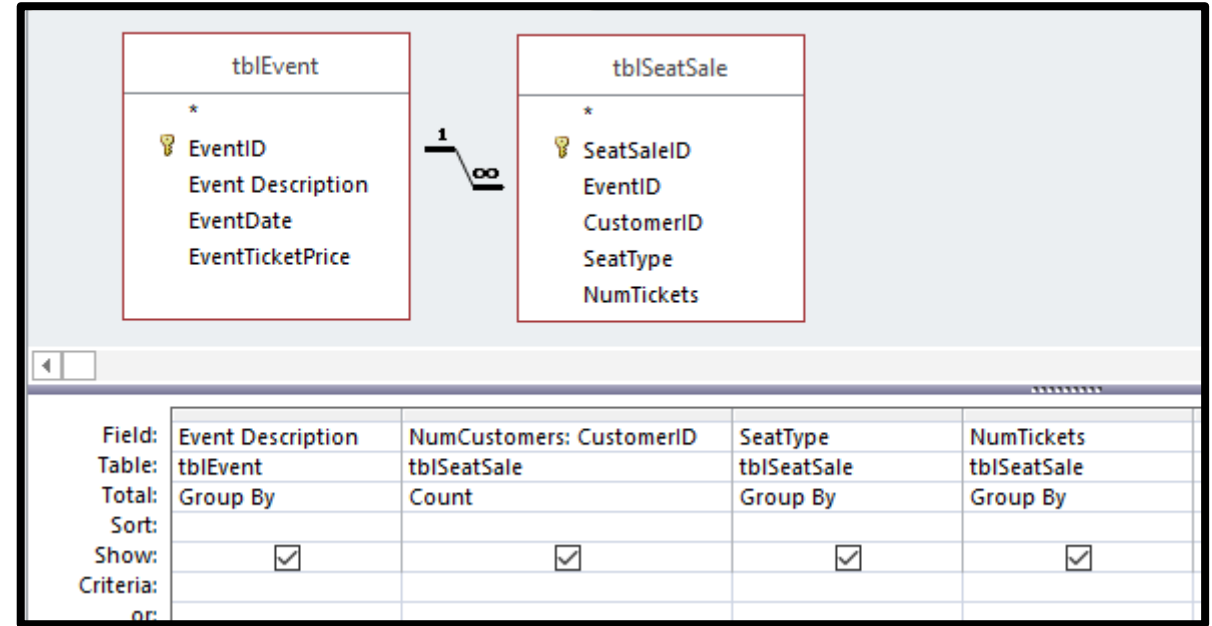

## 'How to' Step 1: The Query

Create this query – which in the next step will be used to create a report.

We will do the calculation for the first bullet point on this query, but will do the other calculations directly on the report.

Click on the 'Totals' button to give us the 'Total' row in the query (see right). On the 'Customer ID' select 'Count'.

Because there is very little data in our database there are a limited number of customers that have booked – but the results are correct (examine your tblSeatSale to confirm).

Event Description	NumCustomers	SeatType	NumTickets
Christmas Songtime	1	No Table	1
Christmas Songtime	1	Table	2
Home Alone	1	No Table	8
Home Alone	1	Table	4
The Polar Express	1	No Table	2
The Polar Express	1	Table	4

- c) Create a report that shows ticket sales for the events. For each event calculate:
- the number of customers who have purchased tickets
  - the number of table tickets purchased
  - the number of non-table tickets purchased
  - the total number of tickets purchased

This is what you will create. Look at the bullet points and identify where each of those things are on the report.

**‘How to’ on the next few slides.**

### Display:

- a suitable report title
- the event descriptions
- the number of customers who have purchased tickets
- the number of table tickets purchased for each event
- the number of non table tickets purchased for each event
- the total number of tickets purchased for each event

# Activity 3: Queries and Report (40 minutes) - 12 marks

---

## Saving Activity 3 Report

Evidence your report as screenprints on your Notepad. Your screenprints must show:

- the **DESIGN** view of the report you have created, including grouping and calculations
- the **DESIGN** view of any queries you have created and used with the report, including fields and criteria
- the **DATASHEET** view of any queries you have created and used with the report.

Save report evidence as a PDF and attach to your Notepad

# Activity 4: Structure Testing (20 minutes) - 6 marks

---

Test the structure of the validation of your relational database using suitable test data (normal, erroneous and extreme as appropriate).

You must provide evidence of table level testing that proves:

1. A record will not save without the surname being present
2. A record will not save if the postcode is not in the correct format
3. A record will not save if the event selected is invalid
4. A record will not save if the seat type is invalid
5. A record will not save if the number of tickets purchased is below the accepted range
6. A record will not save if the number of tickets purchased is above the accepted range

Complete the test log to show how you have tested the structure of your database on your Notepad

# Activity 4: Structure Testing (20 minutes) - 6 marks

Test Number and Field	Type of test (N, R, X)	Test Data	Expected Results	Add <u>Screenprints</u> of the results (including any re-tests). Ensure you show the test data used.	Only complete this column if the results were not as expected. Explain the error.
1. Surname	N	Bell	Data will be accepted		
2. Surname	R	None - leave blank	Unable to save record		

N = Normal Data (correct data)

R = Abnormal Data (incorrect data)

X = Extreme Data (used in range checks to test the extreme range of the data – e.g. boundary data)

# Activity 5: Structure Evaluation (20 mins) - 6 marks

---

Evaluate your database structure. You should consider:

- How well your database structure has minimised data duplication
- How well your database structure meets these requirements:
- There are two types of seat: seats without tables and seats with tables
- There must be at least one ticket purchased with each sale
- A sale cannot exceed eight tickets.

Save your evaluation as a PDF in your folder for submission as

**activity5\_[Registration number #]\_[surname]\_[first letter of first name]**

# Activity 5: Structure Evaluation (20 mins) – 6 marks

## Pass

Describe	Give a clear description that includes all the relevant features – think of it as 'painting a picture with words'.
Define	Clearly explain what a particular term means and give an example, if appropriate, to show what you mean.
Design	Create a plan, proposal or outline to illustrate a straightforward concept or idea.
Explain	Set out in detail the meaning of something, with reasons. More difficult than describe or list, so it can help to give an example to show what you mean. Start by introducing the topic then give the 'how or 'why'.
Identify	Point out or choose the right one or give a list of the main features.
Illustrate	Include examples or a diagram to show what you mean.
Interpret	Define or explain the meaning of something.
List	Provide the information in a list, rather than in continuous writing.
Outline	Write a clear description but not a detailed one.
Plan	Work out and plan how you would carry out a task or activity.
State	Write a clear and full account.
Summarise	Write down or articulate briefly the main points or essential features.

## Merit

Analyse	Identify separate factors, say how they are related and how each one contributes to the topic.
Assess	Give careful consideration to all the factors or events that apply and identify which are the most important or relevant.
Compare/Contrast	Identify the main factors that apply in two or more situations and explain the similarities and differences or advantages and disadvantages.
Demonstrate	Provide several relevant examples or related evidence which clearly support the arguments you are making. This may include showing practical skills.
Design	Create a plan, proposal or outline to illustrate a relatively complex concept or idea.
Explain in detail	Provide details and give reasons and/or evidence to clearly support the argument you are making.
Justify how/why	Give reasons or evidence to support your opinion or view to show how you arrived at these conclusions.

## BTEC Command Verbs

## Distinction

Appraise	Consider the positive and negative points and give a reasoned judgement
Assess	Make a judgement on the importance of something – similar to evaluate.
Comment	Give your view after you have considered all the evidence. In particular critically decide the importance of all the relevant positive and negative aspects.
Criticise	Review a topic or issue objectively and weigh up both positive and negative points before making a decision.
Draw conclusions	Use the evidence you have provided to reach a reasoned judgement.
Evaluate	Review the information then bring it together to form a conclusion. Give evidence for each of your views or statements.
Evaluate critically	Decide the degree to which a statement is true or the importance or value of something by reviewing the information. Include precise and detailed information and assess possible alternatives, bearing in mind their strengths and weaknesses if they were applied instead.
